

1. main

Real exam1

Real exam2

Real total

Input exam1

Input exam2

$total = (exam1 \cdot .60) + (exam2 \cdot .40)$

Output "Total Score: " & total

End

2. main

String ticker

Integer shares

Real cost_per_share

Real amount_invested

Input ticker

Input shares

Input cost_per_share

$amount_invested = shares \cdot cost_per_share$

Output "Amount invested in ", ticker, ":", "\$", amount_invested

End

3. main

String last_name

Real midterm

Real final

Real total_exam_points

Input last_name

Input midterm

Input final

$total_exam_points = midterm \cdot .40 + (final \cdot .60)$

Output "Student: " & last_name

Output "Total Exam Points: " & total_exam_points

End

4. main

Real amount_received

Real amount_each

Input amount_received

$amount_each = amount_received / 3$

Output "Amount each person receives: \$" & amount_each

End

5. main

Real purchase_price

Real current_price

Integer quantity

Real value_change

Input purchase_price

Input current_price

Input quantity

$value_change = (current_price - purchase_price) \cdot quantity$

Output "Increase or decrease in stock value: \$" & value_change

End
